CRONIN

EXPLORATION

BEN-MY-CHREE

October 2026

Disclaimer

The information contained herein has been prepared to assist interested parties in making their own evaluation of Cronin Exploration Inc. (“Allied” or the “Company”) and does not purport to contain all of the information that a prospective investor or partner may desire. In all cases, interested parties should conduct their own investigation and analysis of Cronin. Neither the Company nor any of its affiliates make any representation or warranty as to the accuracy or completeness of the information presented. This includes, without limitation, any estimates or projections, and neither the Company nor its affiliates shall have any liability for any statements (expressed or implied) contained in, or for any omissions from, this presentation or any other written or oral communications transmitted to the recipient hereof in the course of its evaluation of the Company, nor should anything contained herein be relied upon as a promise, representation or warranty regarding future events or performance of the Company. Moreover, the information contained herein speaks as of the date hereof; the Company undertakes no obligation to update any such information. The only statements that will have any legal effect will be those specifically contained or referred to, and then only to the extent provided, in definitive legal documentation.

Forward Looking Statements and Cautionary Notes – This presentation contains “forward-looking information” within the meaning of the Canadian securities laws. Statements, other than statements of historical fact, may constitute forward-looking information and include, without limitation, statements about: anticipated timing and content of upcoming work programs, geological interpretations, receipt of property titles, and potential copper recovery processes; anticipated dates for receipt of permits, approvals and other milestones; anticipated results of drilling programs, feasibility studies and other analyses; anticipated availability and terms of future financing; future production, operating and capital costs; and operating or financial performance. Information concerning potential contingent copper resource estimates also may be deemed to be forward-looking information in that it reflects a prediction of the copper-bearing zones that would be encountered if a copper structure were developed and produced.

With respect to the forward-looking information contained in this presentation, the Company has made numerous assumptions regarding, among other things, the geological, metallurgical, engineering, financial and economic advice that the Company has received is reliable and are based upon practices and methodologies which are consistent with industry standards. While the Company considers these assumptions to be reasonable, these assumptions are inherently subject to significant uncertainties and contingencies.

Additionally, there are known and unknown risk factors which could cause the Company’s actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by the forward-looking information contained herein. Known risk factors include, among others: fluctuations in commodity prices and currency exchange rates; uncertainties relating to interpretation of well results and the geology, continuity and grade of copper deposits; uncertainty of estimates of capital and operating costs, recovery rates, production estimates and estimated economic return; the need for cooperation of government agencies in the exploration and development of properties and the issuance of required permits; the need to obtain additional financing to develop properties and uncertainty as to the availability and terms of future financing; the possibility of delay in exploration or development programs or in construction projects and uncertainty of meeting anticipated program milestones; uncertainty as to timely availability of permits and other governmental approvals; increased costs and restrictions on operations due to compliance with environmental and other requirements; increased costs affecting the metals industry and increased competition in the metals industry for properties, qualified personnel, and management.

All forward-looking information herein is qualified in its entirety by this cautionary statement, and the Company disclaims any obligation to revise or update any such forward-looking information or to publicly announce the results of any revisions to any of the forward-looking information contained herein to reflect future results, events or developments, except as required by law.

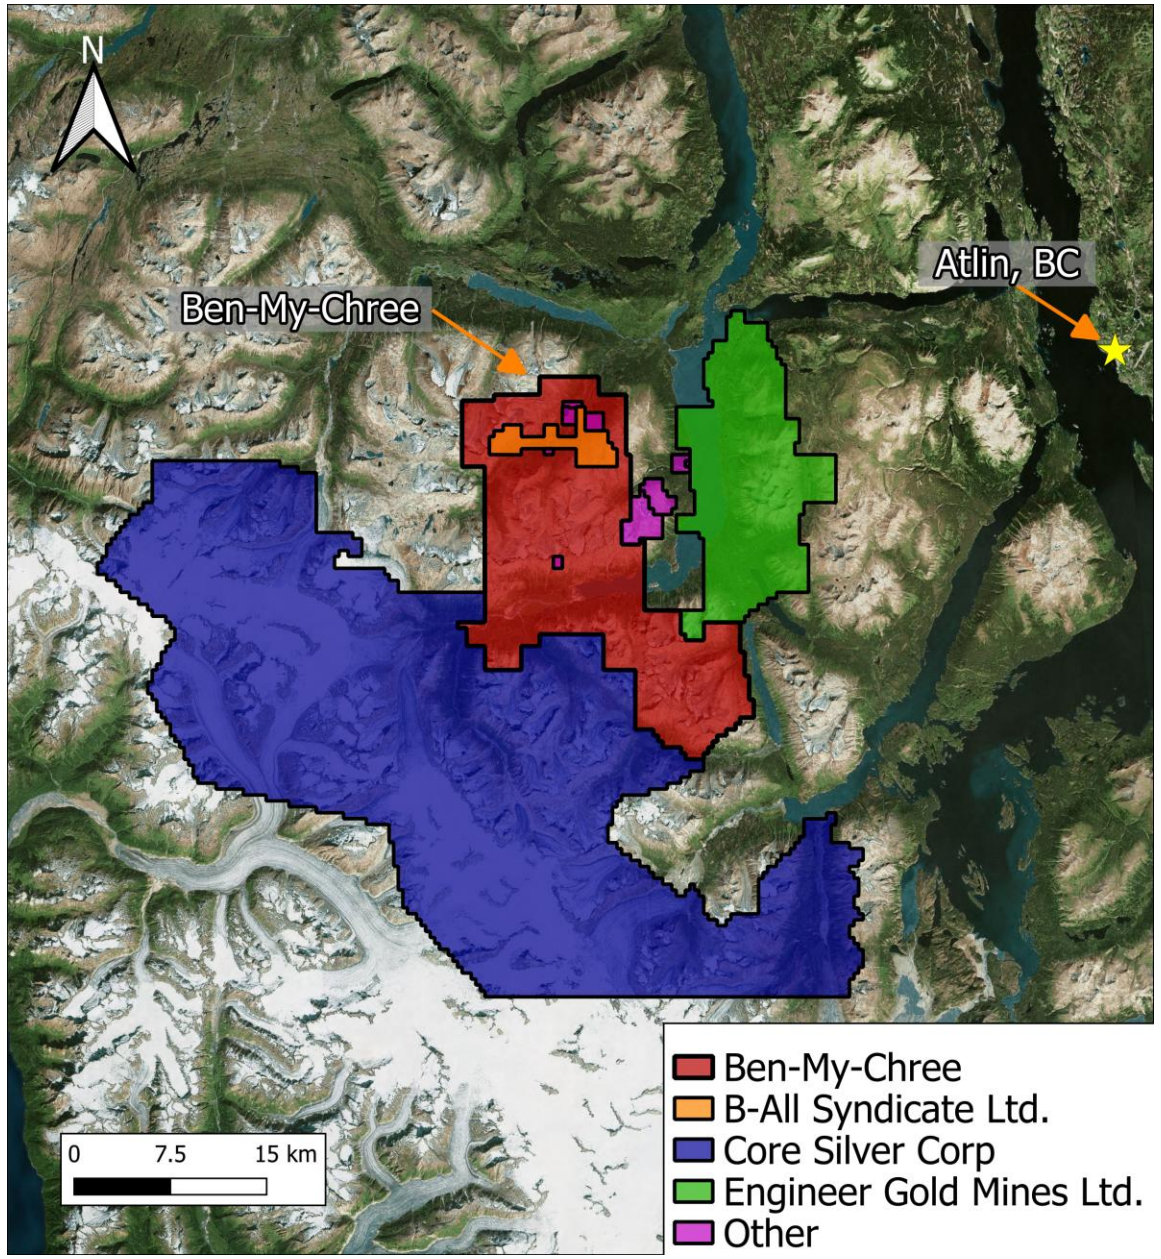

Qualified Person – Technical information contained in this presentation has been reviewed and approved by Ian Dickie, P.Geo., a “Qualified Person” as defined by National Instrument 43-101 – Standards of Disclosure for Mineral Projects.

Overview

- Ben-My-Chree: Cu-Ag-Au-Pb
- Little to no detailed work
  - Located in one of BC's last unexplored areas in the Stikine Terrane
  - Retreating glaciers exposing new untested gossans
- Adjacent and on property assays of up to -
  - 62 g/t Au ,
  - 0.7% Cu,
  - 5310 g/t Ag,
- Project sits along a known mineralized regional trend and within the Lewellyn Fault structural corridor -
  - Associated with mineralization at the Engineer Mine and the Mt Skukum Mine

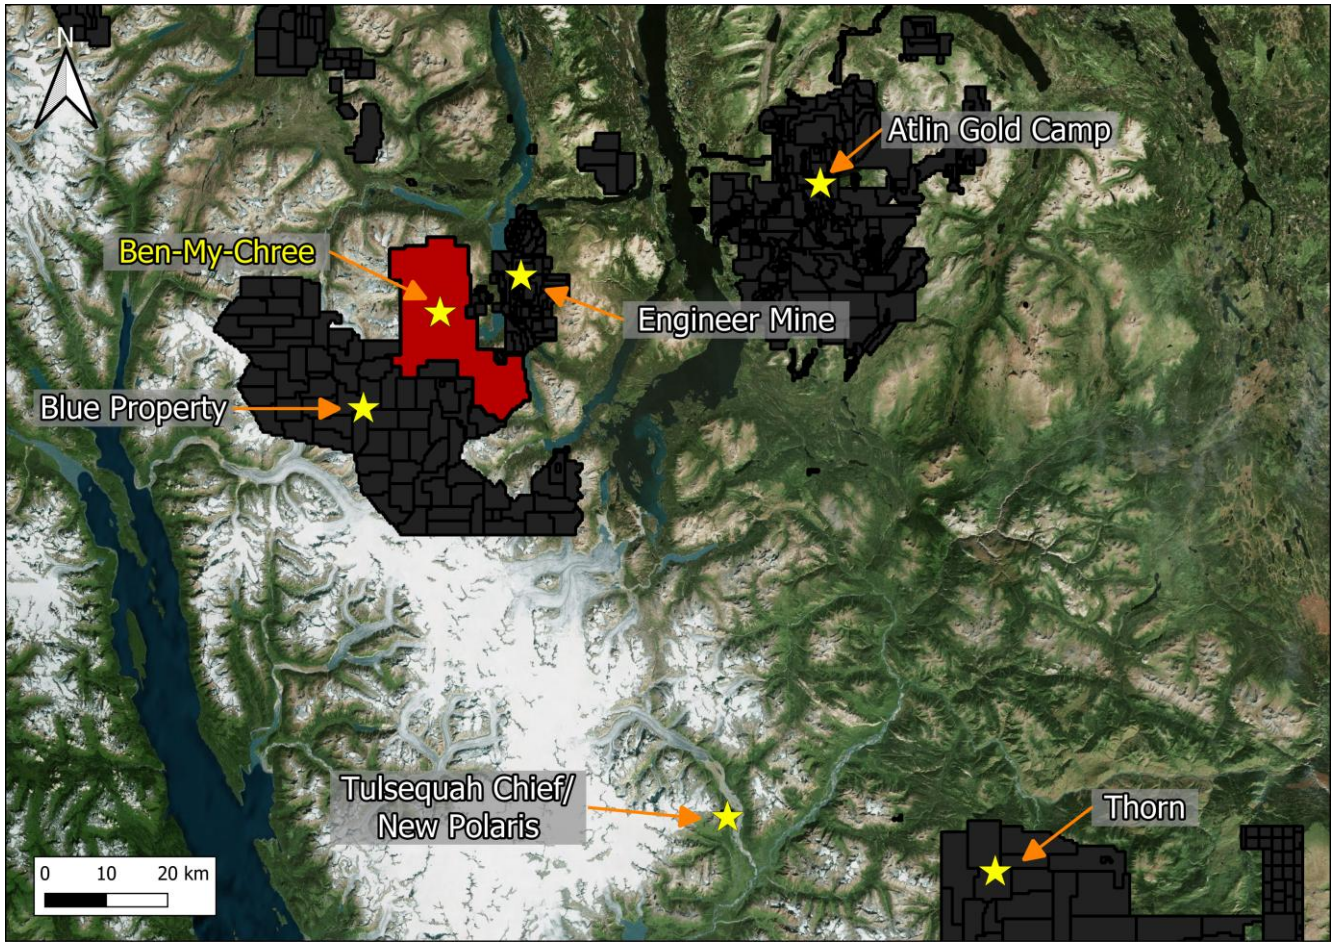

Location & Regional Overview

- ~35,000ha
- 35km SW of Atlin
  - Helicopter access
- Target:
  - Cu-Mo-Au-Ag porphyry/Skarn/CRD continuum
  - Structurally-related Au-Ag
  - Polymetallic vein systems
- Regional analogues:
  - Silver Lime/Laverdiere Project (Blue Property)
  - Skukum Mine
  - Engineer Mine

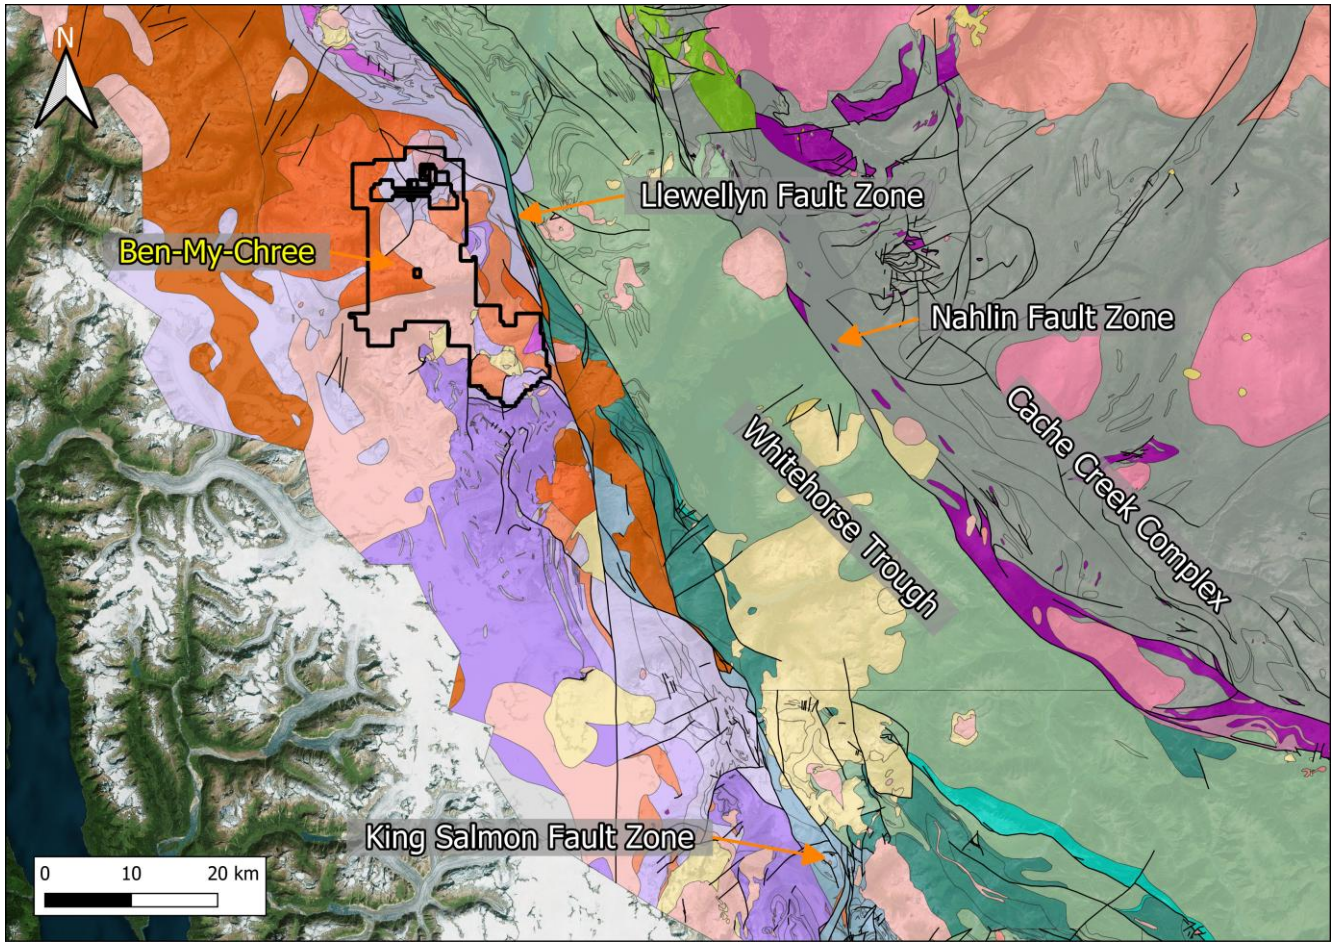

Regional Producers

- **Thorn Project, Brixton Metals, (BBB)**
  - 24.4Moz AgEq (2021)
- **Engineer Mine, Engineer Gold Mines Ltd, (EAU)**
  - 10,400t @ 60 g/t Au
- **New Polaris Mine, Canagold, (CCM)**
  - >1 Moz Au
- **Tulsequah Chief, Teck Resources, (TECK)**
  - 933kt @ 3.77 g/t Au, 126.5 g/t Ag, 1.59% Cu, 7% Zn, 1.54% Pb
- **Atlin Gold Camp, Brixton Metals, Other**
  - >1Moz Au

Regional Geology

- Western edge of the Intermontane Belt in Northwest BC
  - Lithologies that geologically define the Intermontane Belt include Devonian to Early Jurassic island arcs and accretionary complexes
- Bound by the Lewellyn Fault to the east
  - Known metal-endowed structure
  - The Engineer and Skukum mines are spatially associated with first and second order structures of this fault system
- The principal regional mineralized trend is NW-SE

Property Mineralization

Bighorn Creek
- 69,000t @ 5.83 g/t Au

Deep Pockets
- Grab samples of up to 78g/t Au, 1.4% Cu, 154g/t Ag

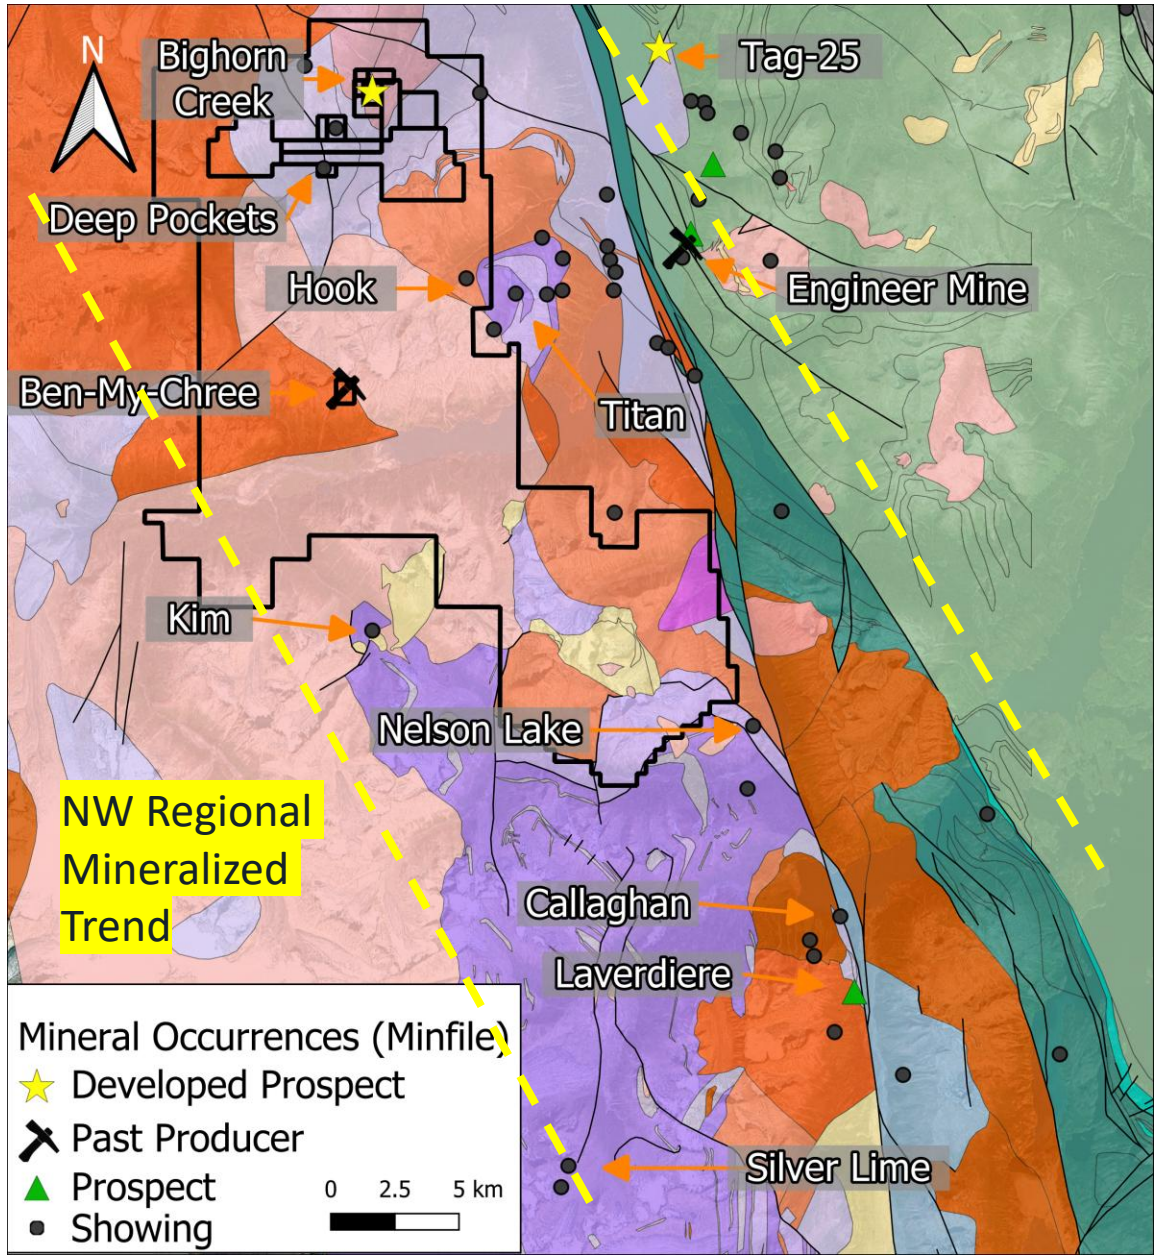

Hook
- On property, up to 62 g/t Au in quartz veins

Kim
- Chip sample of 4.03% Cu, 0.82% Zn, 109g/t Ag silver, 0.69 g/t Au

Nelson Lake
- Grab sample of 4.6 g/t Au, 198 g/t Ag,3.9% Pb, 1.25% Cu

Callaghan
- Grab samples of up to 54g/t Au, 240 g/t Ag

Titan
- Grab samples of up to 11.7 g/t Au, >1% Pb, >100 g/t Ag,,0.8% Cu

Property Mineralization

Ben-My-Chree

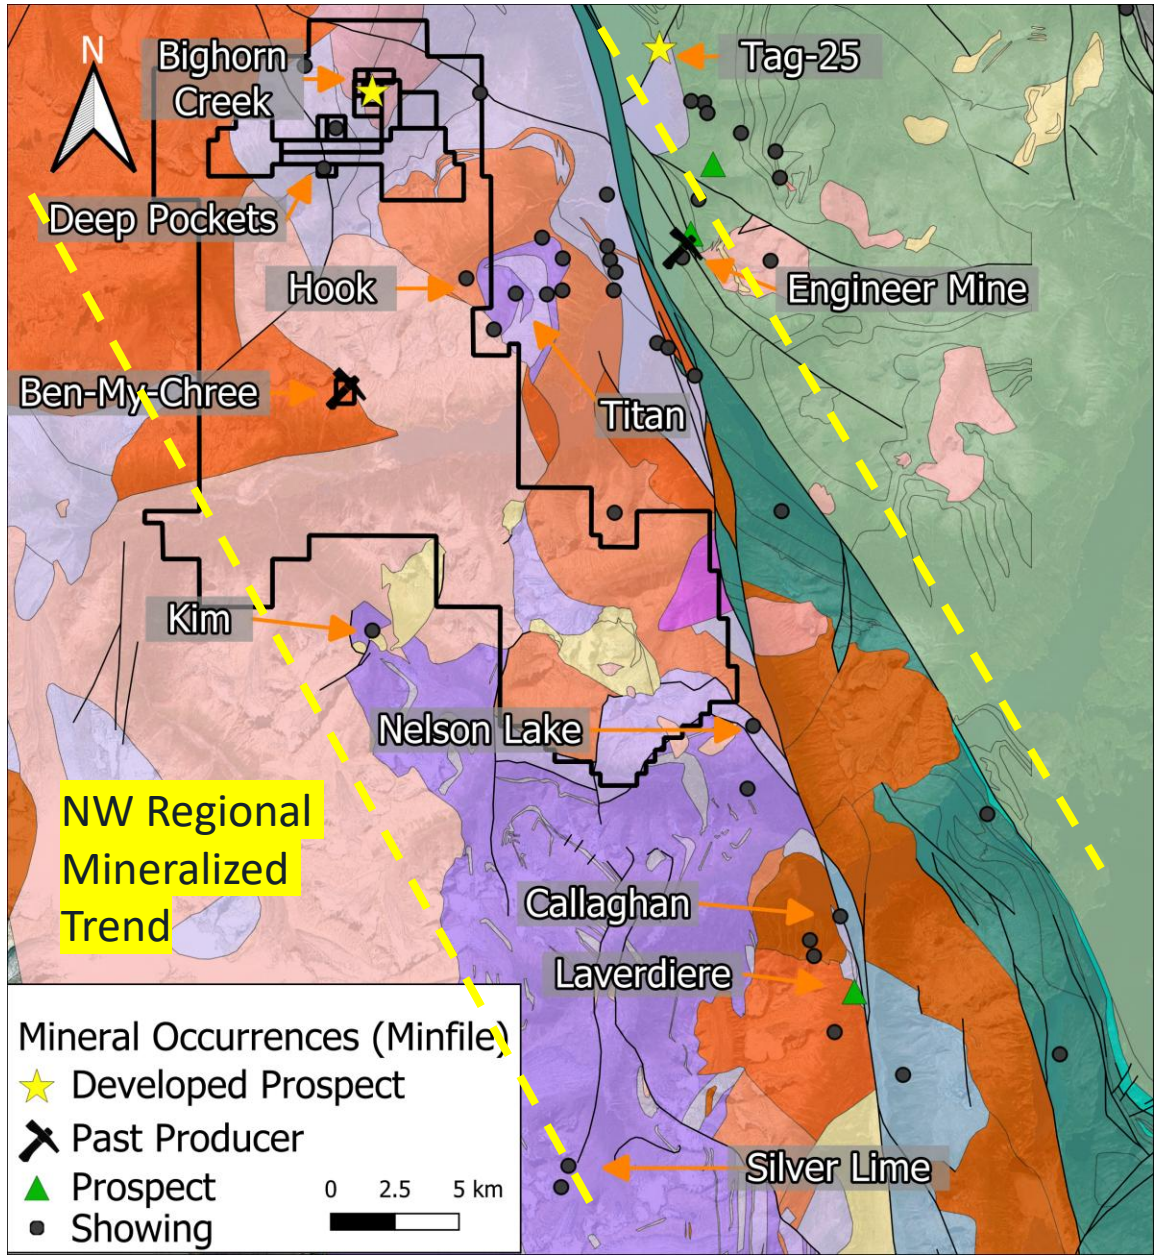

- Originally discovered and staked in the early 1900's
- In 1911 a drift was advanced into the steep mountainside. In October of that year, an avalanche buried the mine
- Site picked up over 100 years later in 2014
  - 9 rock samples were taken,
    - 5 of which >1500g/t Ag, max of **5310 g/t Ag,**
    - Four >1% Pb, max of 9.38%.
    - Up to 0.7% Cu and 0.26% Sb

Laverdiere

- Widespread Cu-Mo-Ag±Au porphyry/skarn mineralization
- ~4000m drilled
- Up to 48.5m of 0.90% Cu, 6g/t Ag, and 0.11g/t Au from 31.46m depth

Silver Lime

- Grab samples of up to 19 g/t Au, 913 g/t Ag, 12.45% Zn and >20.0% Pb
- CRD-style mineralization

Regional Geophysics

Regional TMI Overlain by Aster

(total silica abundance plus Fe oxides)

- Coincident aster with certain magnetic anomalies, i.e., alteration/structural interference
- Noticeable elevated Fe oxides and Silica in areas of known mineralization
- Aster anomalies have never been followed up on

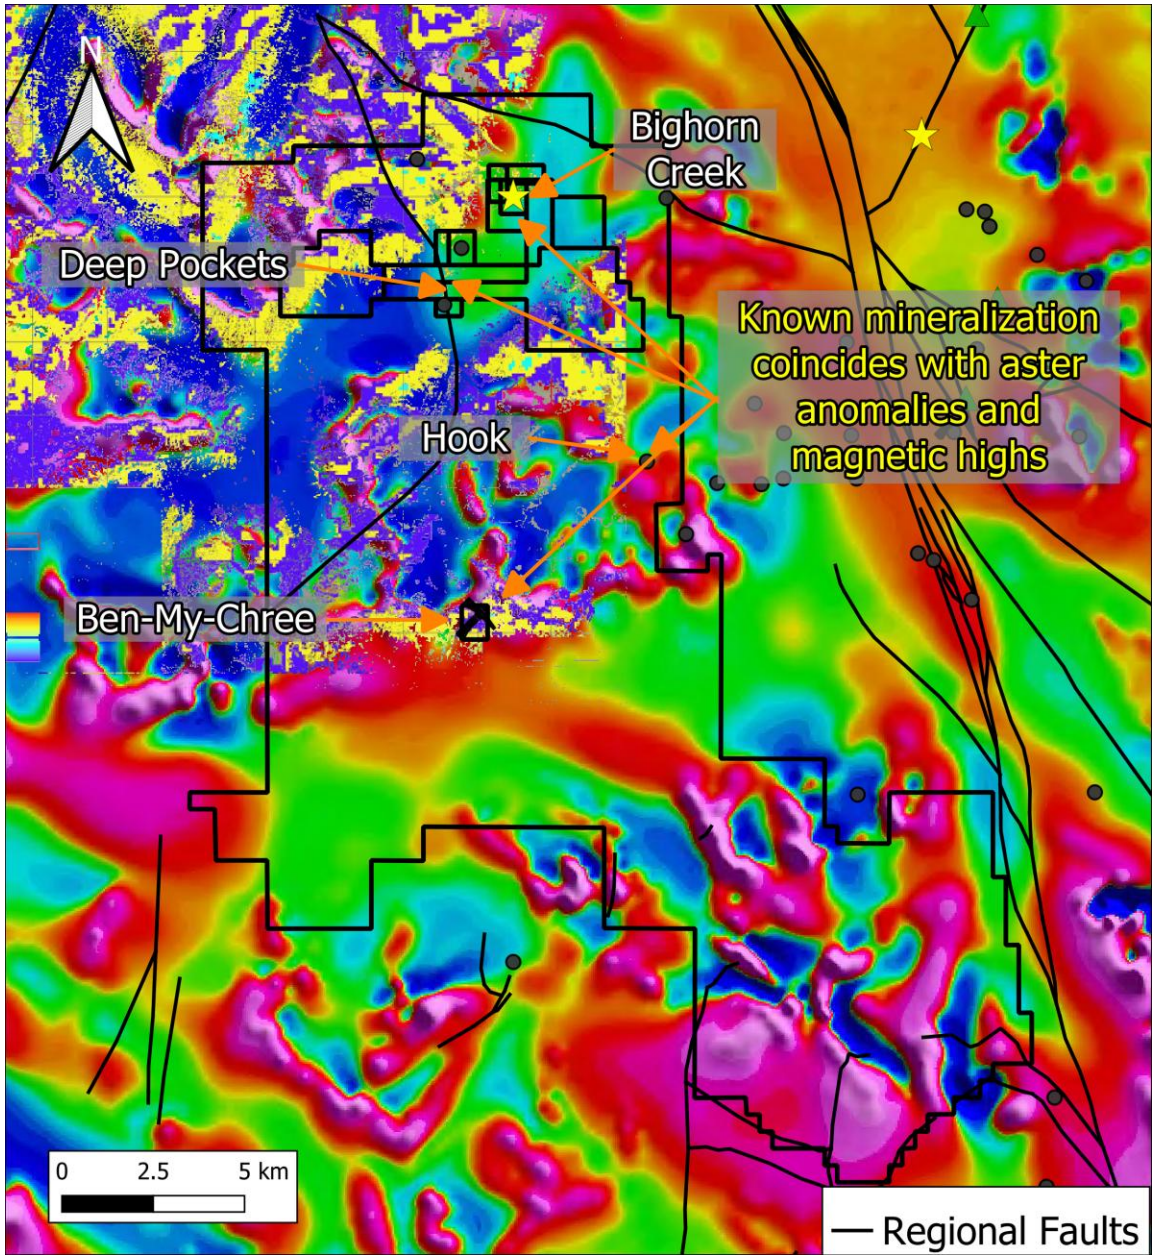

Deep Pockets

- Grab samples of up to 78g/t Au, 1.4% Cu, 154g/t Ag

Hook

- On property, up to 62 g/t Au in quartz veins

- **Ben-My-Chree**
  - 5310 g/t Ag, 9.38%. Pb, 0.7% Cu, 0.26% Sb

Proposed Exploration Program

Year 1 – Propose Exploration Program
▪ Property-scale hyperspectral survey

▪ Reconnaissance geological mapping and sampling program
  ▪ Heli-operated
  ▪ Driven by satellite imaging revealing several unexplored gossans exposed by retreating glaciers and the above hyperspectral survey
  ▪ Follow up on untested aster anomalies and hyperspectral survey mentioned above

Summary

- Polymetallic (Cu-Ag-Au-Pb)
- Little to no detailed work, >90% of the property never walked
  - Located in one of BC's last unexplored areas in the Stikine Terrane
- Potential for several deposit styles
  - Cu-Mo-Au-Ag porphyry/Skarn/CRD continuum
  - Structurally-related Au-Ag
  - Polymetallic vein systems
- Sits in a structurally and geologically prospective corridor with known deposits

About Cronin Exploration

Natural Resources focused investor and advisor

We seek opportunities to **Partner** with management teams in the **Formation** and **Development** of companies

Principal investors, **Proprietary** deal flow, **Global** reach

From **Seed** though **Harvest,** growing the companies of tomorrow through **Diligent Advice** and **Patient Capital**
